

Akhaldaba Private House

Project details:

Location	Akhaldaba, Georgia
Area	400 sqm
Program	Residential
Status	Built, 2023

The building is a two-story individual residential house with a pool. Following an analysis of the landscape and the site, our goal was to create architecture that harmoniously blends with the environment. On the one hand, by integrating the client's needs into the design; on the other, through the functional distribution of spaces, to develop an architectural form that ensures the synergy of content and functionality.

Considering the challenging terrain, the functions were distributed into three programmatic blocks. The blocks' shifting directions created semi-open spaces connecting with the surrounding landscape.
