

# The Costești Multifunctional Center.

## The Costesti Multifunctional Center

It was designed as a multifunctional center for cultural, educational, and social activities. The project aims to revitalize and modernize the local cultural infrastructure, integrating contemporary architectural elements with flexible functionalities for the community.

The building is designed to be an architectural landmark, reflecting the dynamism and progress of the community. Both interior and exterior spaces are designed to stimulate creativity, interaction, and social cohesion.

The ground floor is centered around a **double-height main auditorium**, clearly the focal space of the building. A **central entrance lobby** provides direct access to the hall and connects to **symmetrical staircases** leading to the upper level.

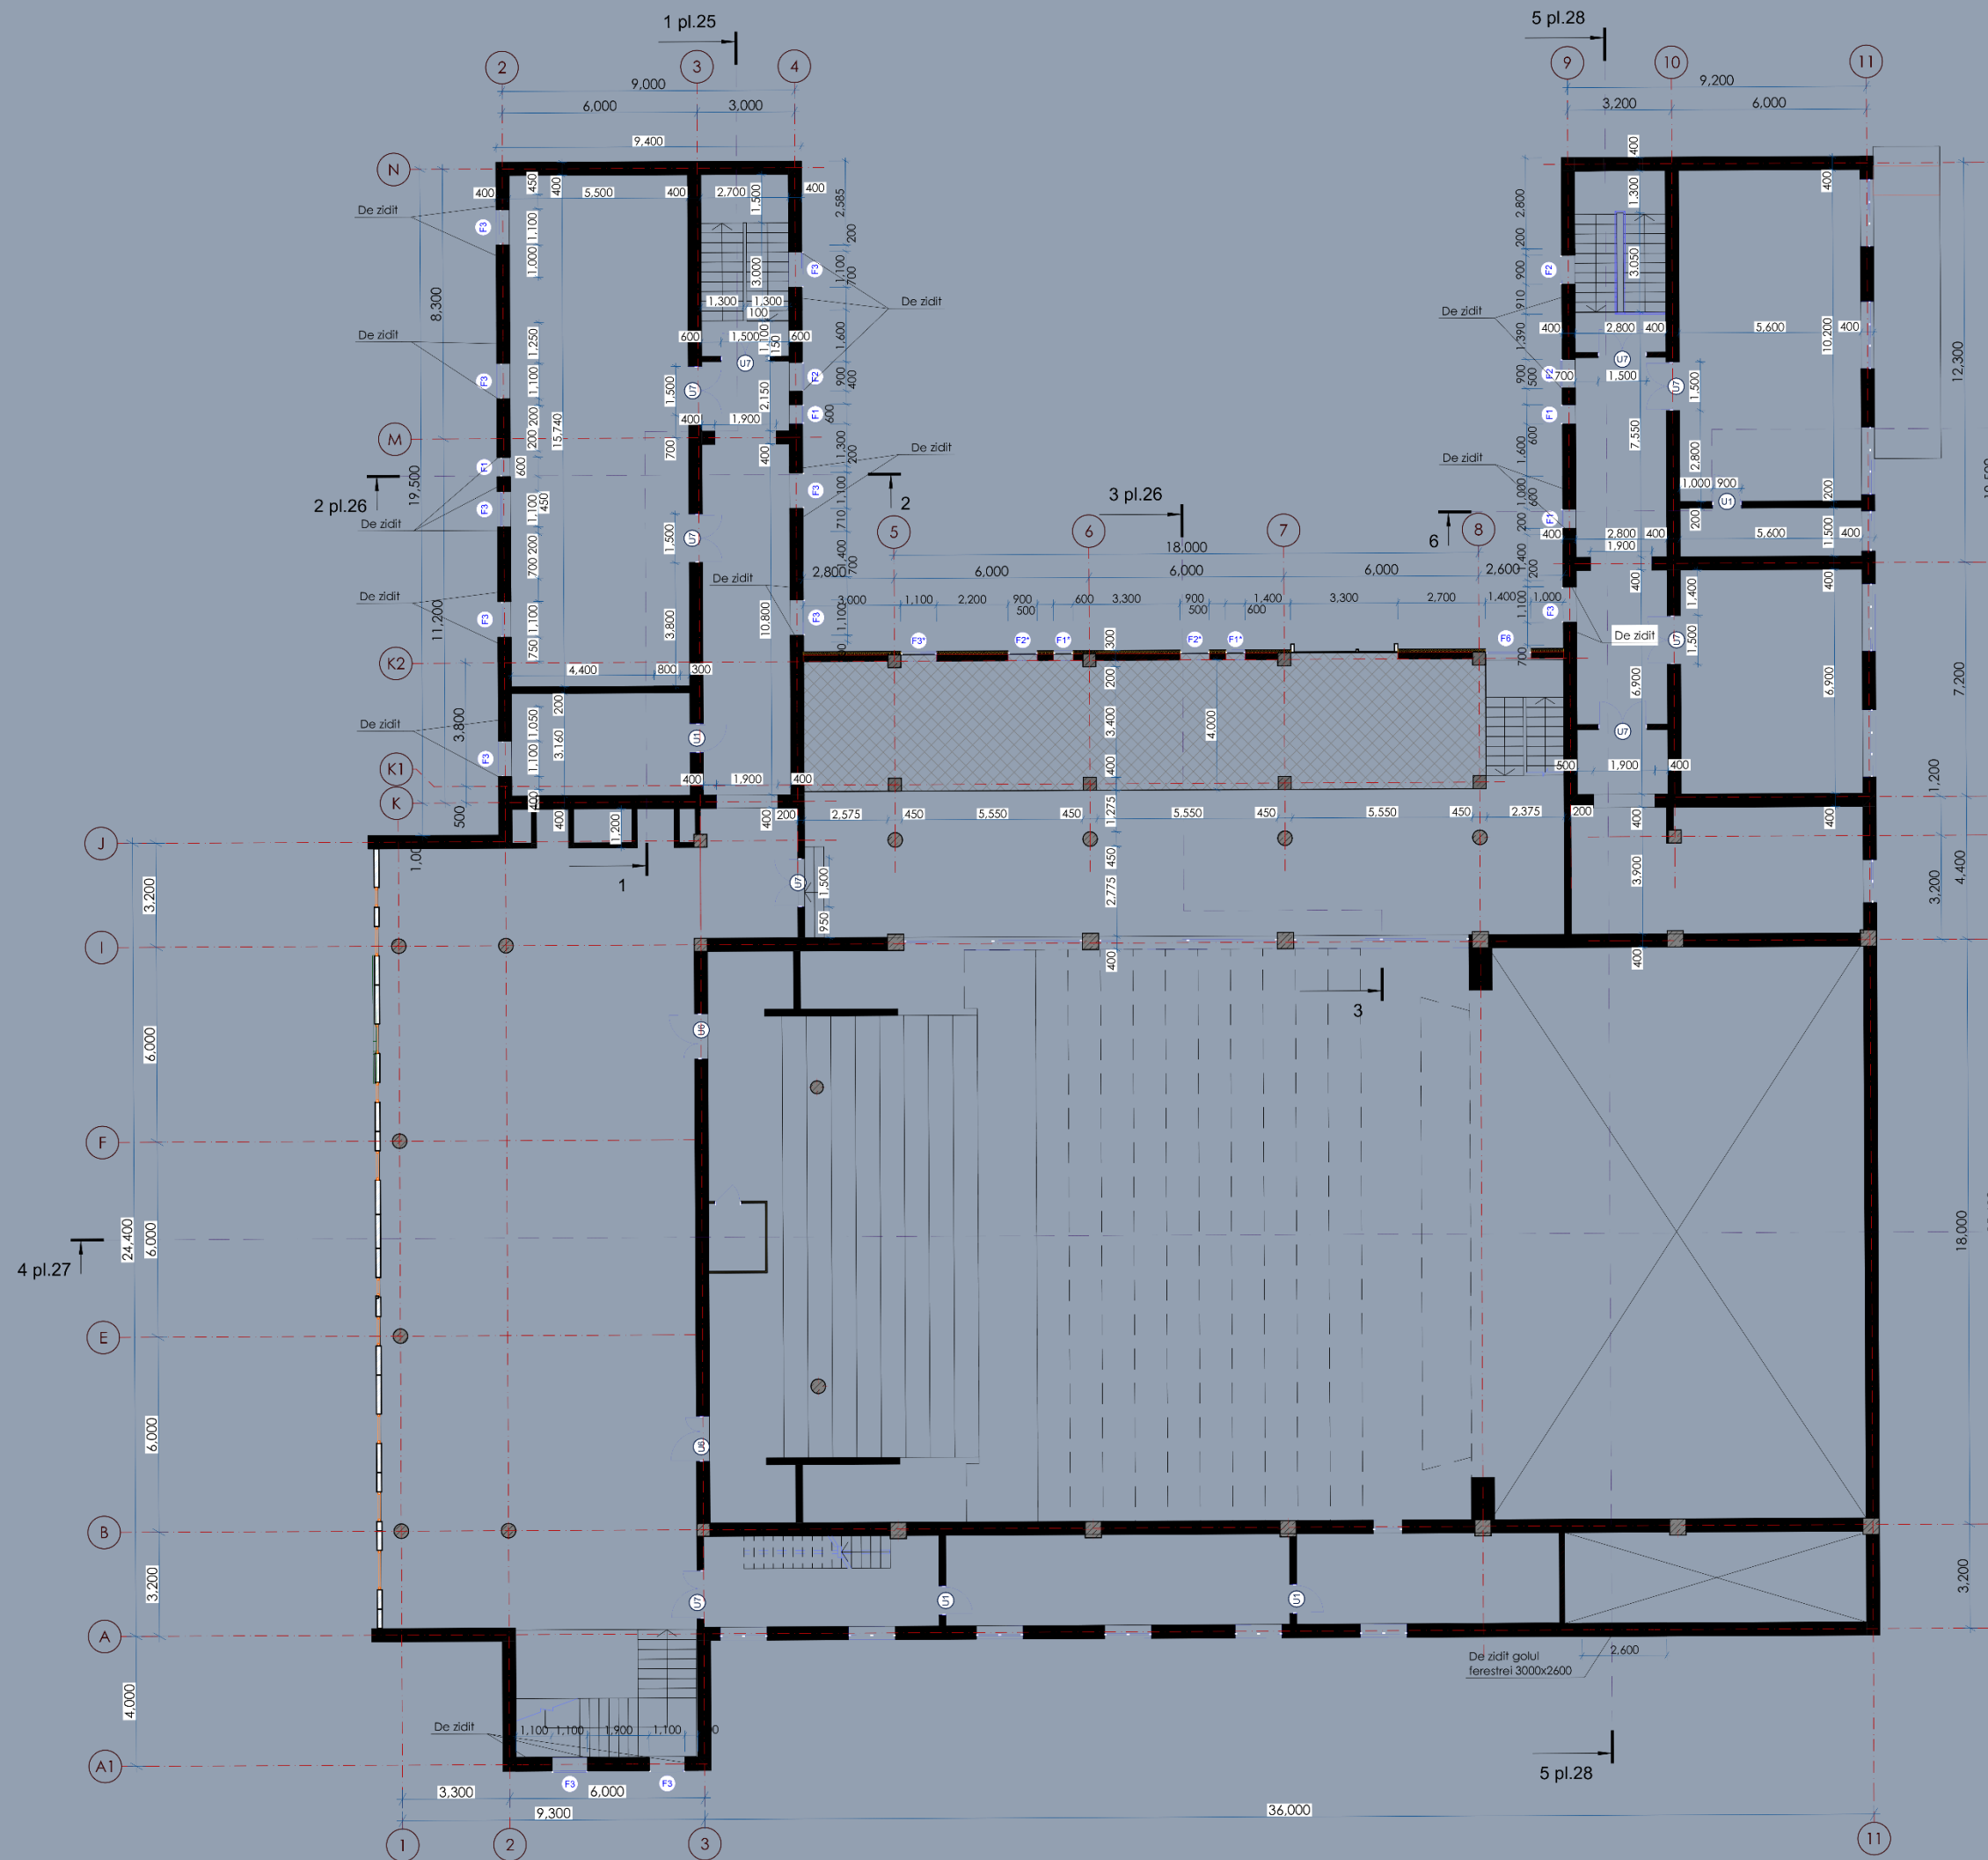

The **side wings** accommodate **administrative offices, sanitary facilities, and service rooms**, logically distributed to support public functions without interfering with circulation. The plan is organized on a **regular structural grid**, promoting modularity and construction efficiency.

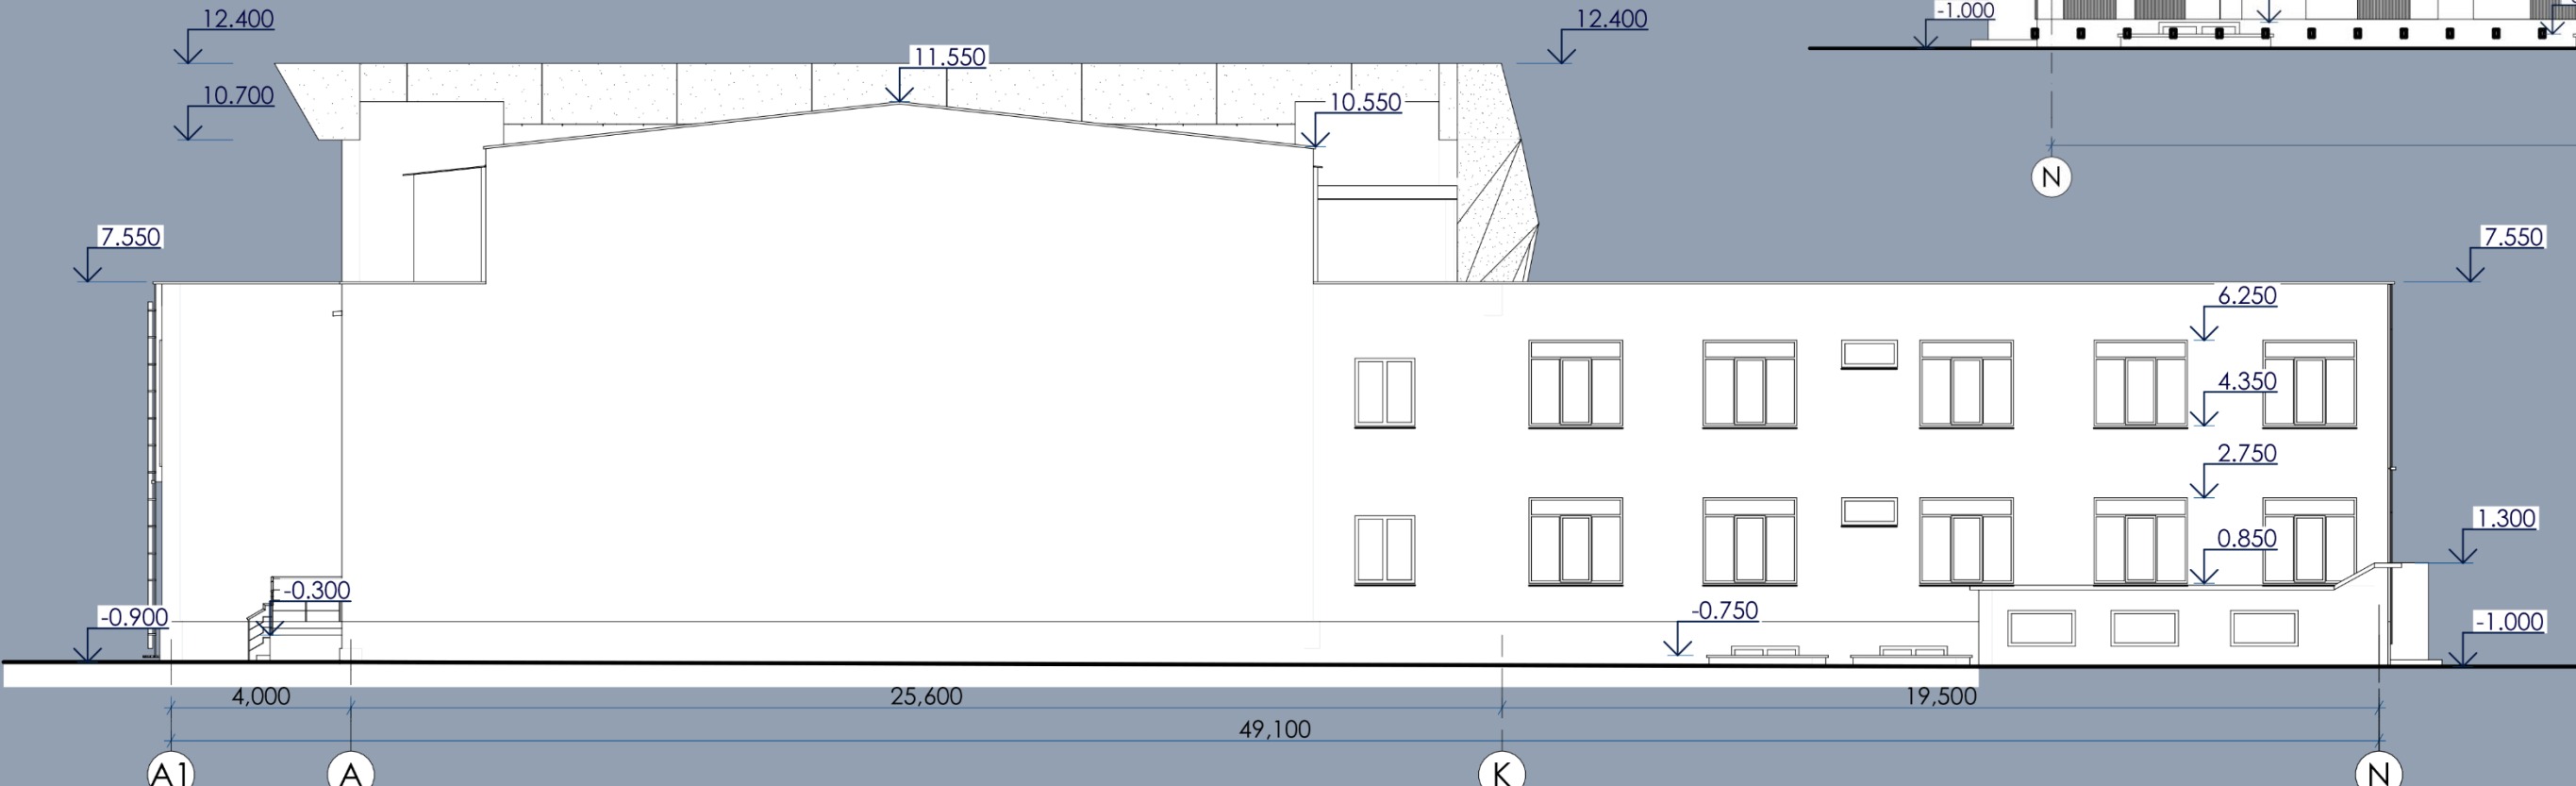

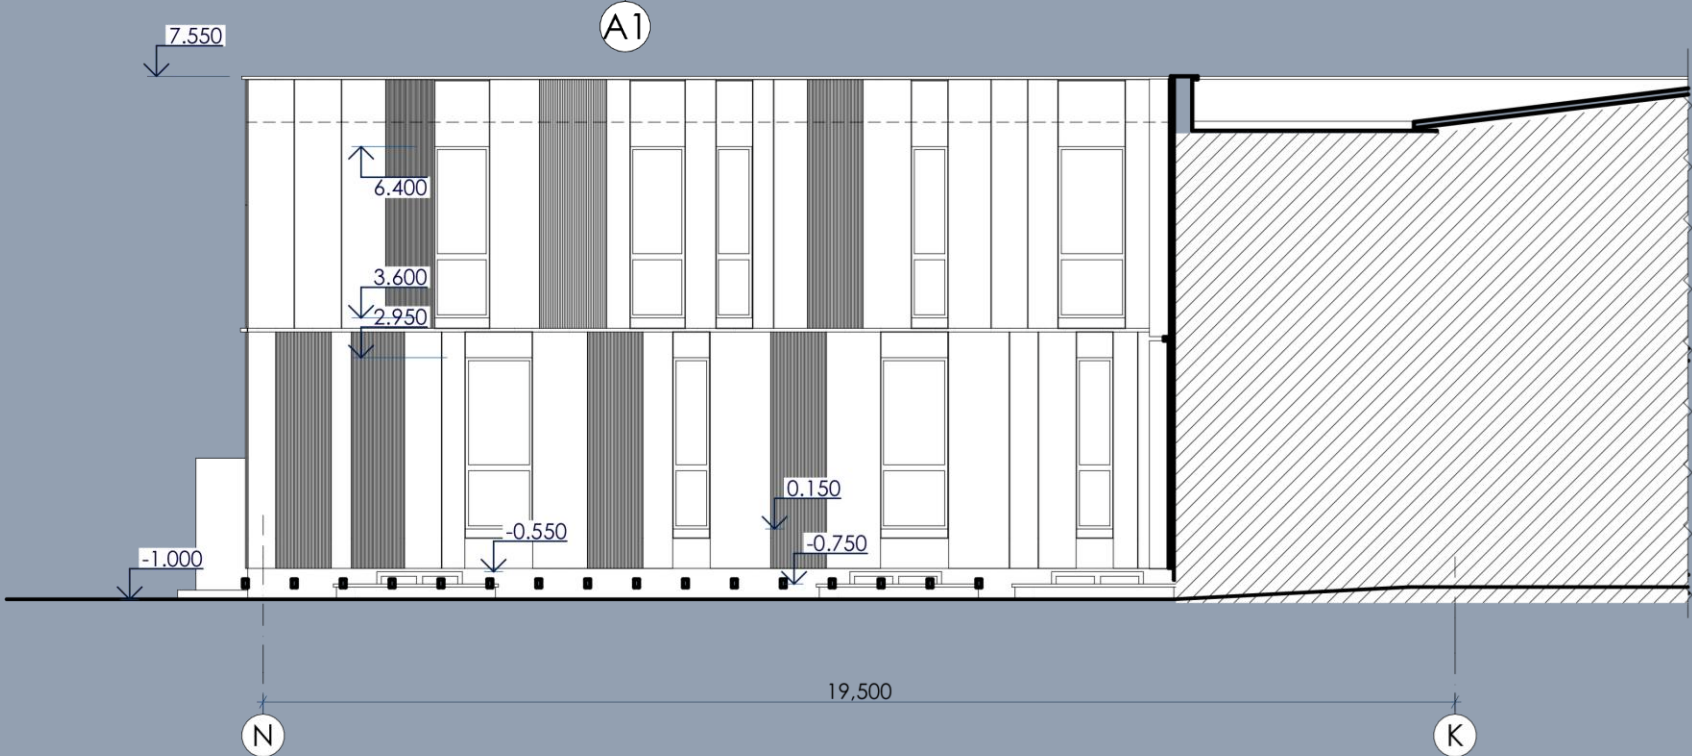

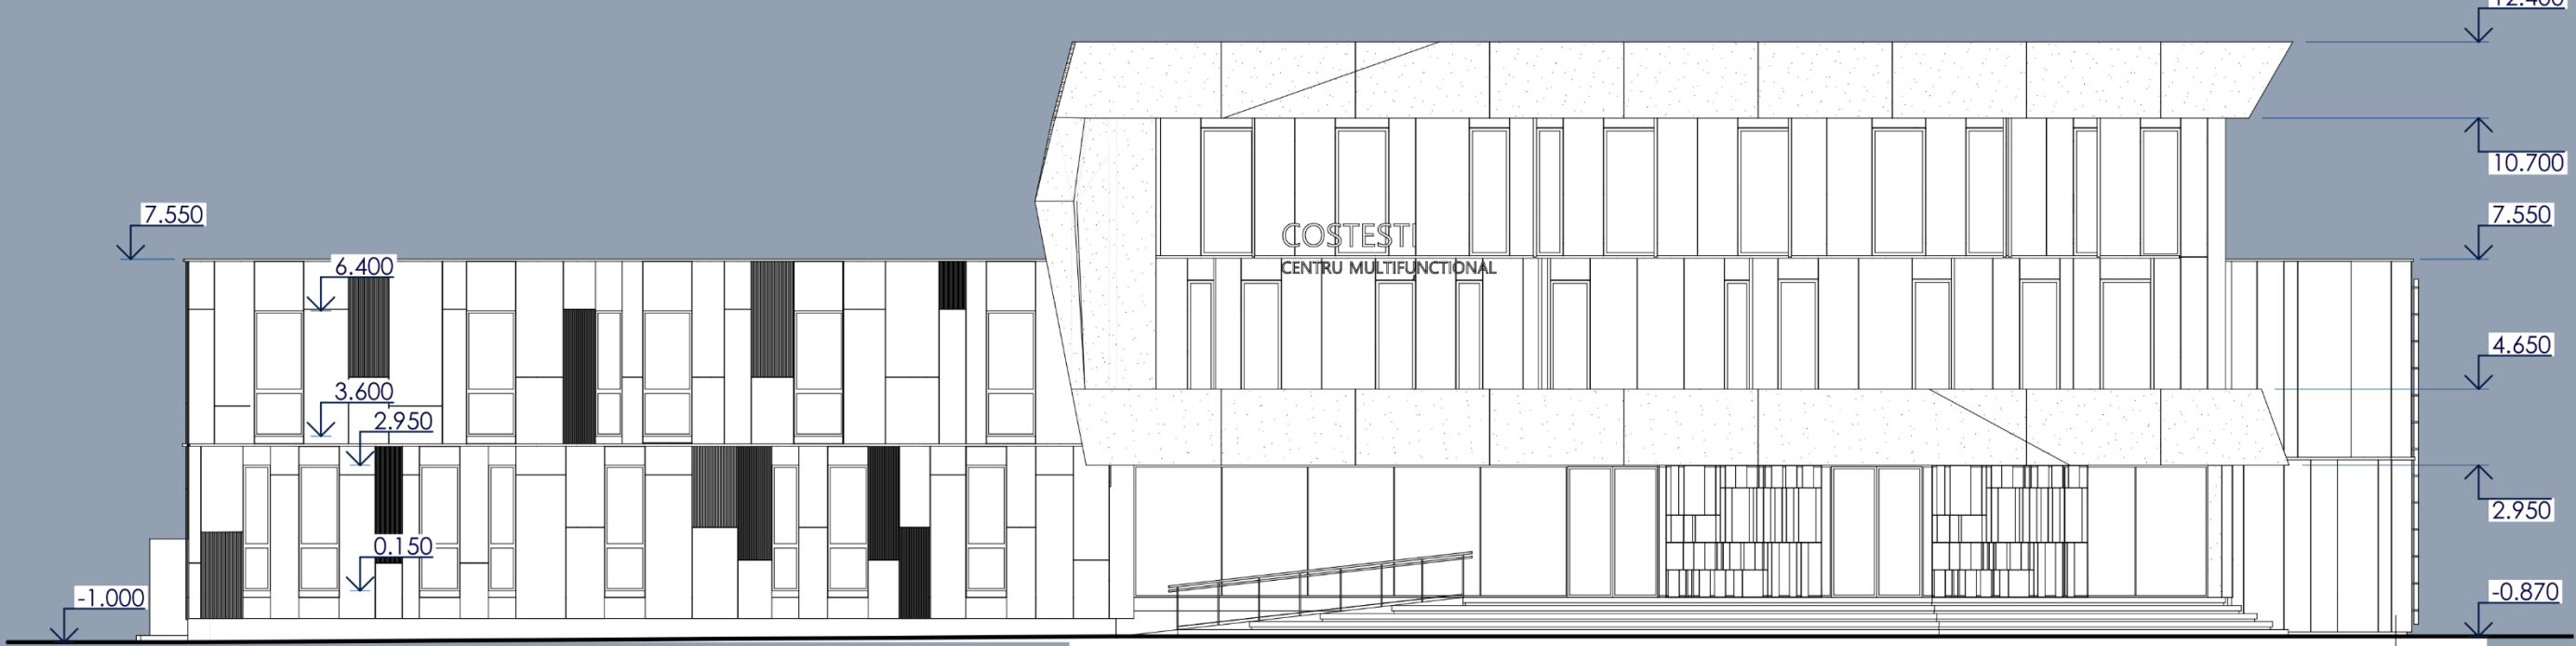

## First floor

The first floor overlooks the auditorium, with a **technical gallery or balcony** positioned above the lobby, likely for audience seating or lighting control.

The **peripheral rooms** in both wings are arranged for **rehearsal spaces, classrooms, or offices**, supporting the cultural and educational functions of the center. Circulation is efficient, with corridors aligned along the main axis and stair access at both ends.

## Concept

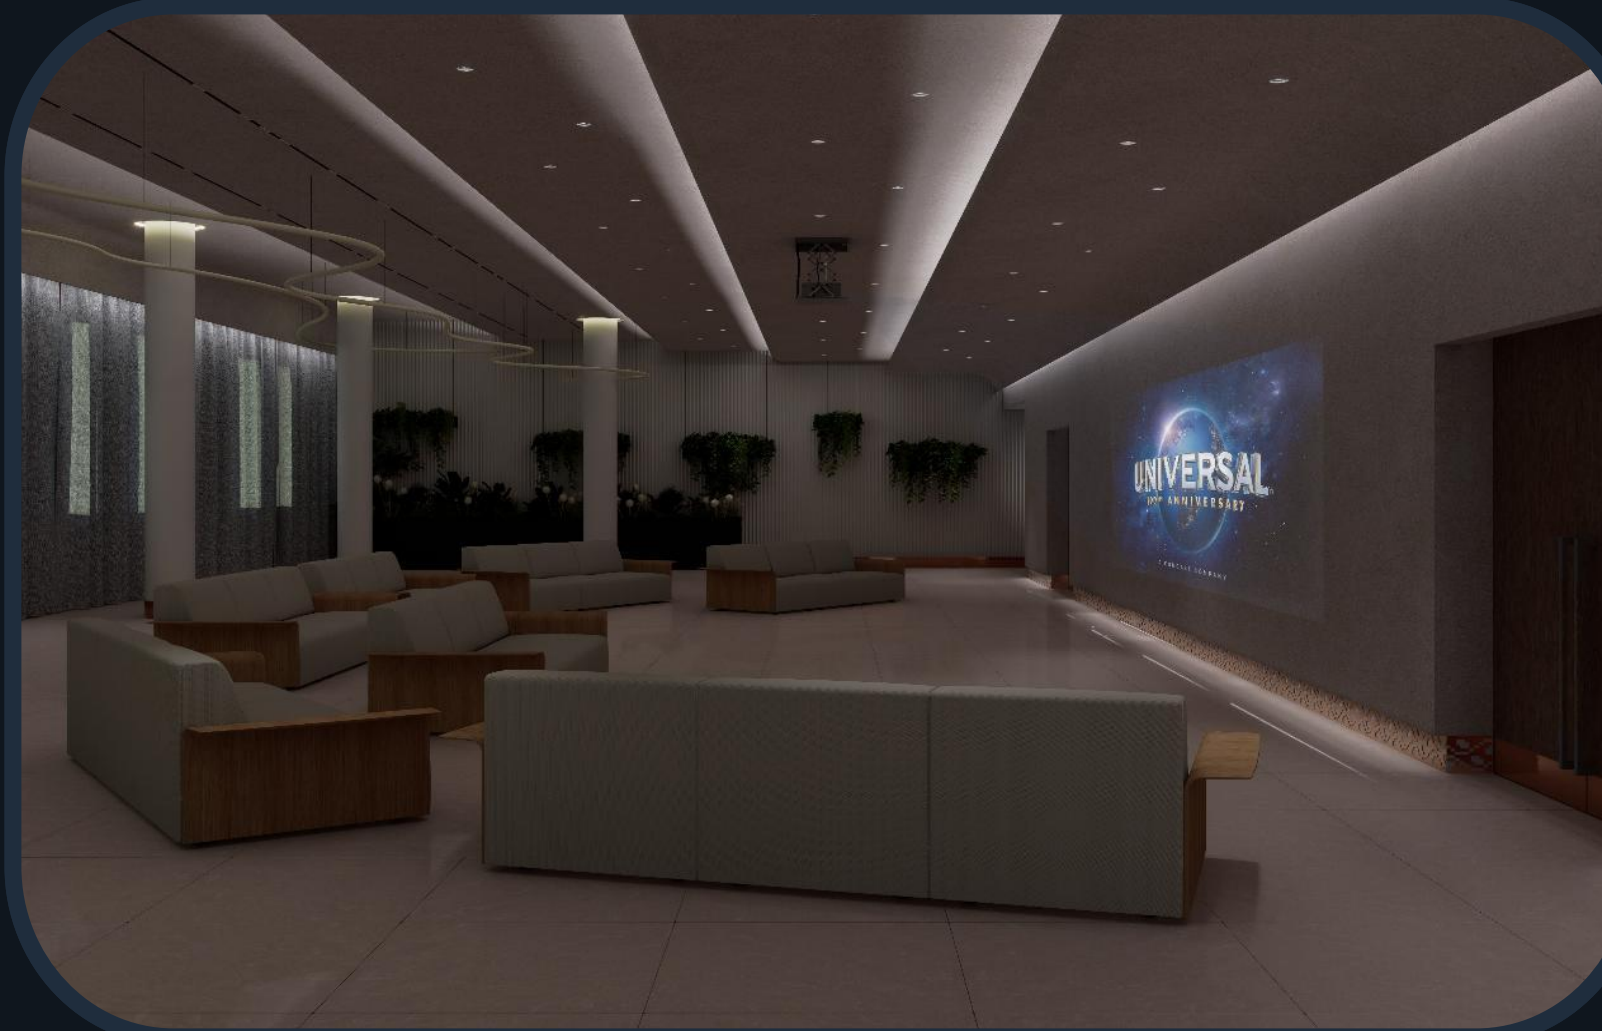

The architectural concept aims to create a versatile cultural space that meets the needs of a modern community. The project promotes openness and transparency through glazed design and adaptable functionalities. The Casa de Cultura becomes a symbol of local identity, supporting education, art, and traditions through cultural events and thematic exhibitions. The integration of modern lighting and efficient climate control technologies contributes to the buildings sustainability. Additionally, the outdoor spaces are designed as areas for community interaction, fostering social cohesion and promoting local values.

As a concept-In Costești, where the Casa de Cultură is being transformed into a vibrant space full of life and activities that bring value to the village and its community, our aim was to create a place that promotes a wide range of activities, from art exhibitions and workshops to educational programs and community gatherings. All of this will be achieved through spaces dedicated to exhibitions, small-scale concerts, and film screenings.

# The Transformation of the Cultural Center into a Multifunctional Hub

The transformation of the Casa de Cultură in Costești into a modern multifunctional center will give new momentum to the local community, providing a space that fosters education, creativity, social connection, and the creation of new opportunities.
